Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.

Claim 1; SEQ ID NO 1622; 180pp; English.

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for

```
ö
identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with alered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiantonylsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                         9

The present invention describes a 254Plb6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254Plb6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID No.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or a protein clattical to an entire amino acid sequence of Pl; (2) a polymucleotide clattical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above, (4) centaring a mammalian immune response directed to the protein of Pl; (5) detecting, in a sample, the presence of a 254Plb6B-related protein or

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B protein, open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to aubsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, S or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein Human nov FITC labe FITC labe FAM label Human 254 Human 254 Human 254 Human 254 Human 254 Conjugate Peptide e Human nov New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer. New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting

Example 13; SEQ ID NO 262; 345pp; English.

and treating cancer.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that compresses a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to a subsequence of the ORF, where the

consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ 1D NO:3, 5 or 7 AbR00592, AbR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that each see 191, 91, 92, 93, 94, 95, 96, 97, 98, or 99* homologous or identical to an entire amino acid sequence of P1; (2) a polynuclectide that encodes the protein; (3) a composition comprising a polynuclectide contains a full complement of the polynuclectide described above; (4) contains a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254P1D6B-related protein or a C2 54P1D6B-related polynuclectide; (6) a composition that modulates the capture of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human composition that comprises the antibody; (17) a pharmaceutical confidence to a cell that expresses the protein of P1; and confidence to a confidence of a 254P1D6B related protoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and c(12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1; and c(12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be composition and detecting cancer. The present sequence represents a chuman 254P1D6B v.2 peptide, which is used in the exemplification of the composition. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New 254PID6B sIRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PiD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cast be useful open reading frame (ORF) sequence which encodes the cast be useful or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO.3, 5 or 7 ADRO0529, ADRO0559, or ADRO0596, or a peptide included in any of the 42 lists of peptides given in the specification, or a protein cany of the 42 lists of peptides, 99, 96, 97, 98, or 99; homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99; homologous or clentical to an entire amino acid sequence of P1; (2) a polymuclectide that is a full complement of the polymuclectide described above; (4) detecting in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polymuclectide; (6) a composition that modulates the capture of a call that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or the fragment, which is monoclonal; the antibody or the fragment, which is monoclonal; the antibody or a protein or a composition animal that produces the antibody; (10) a pharmaceutical animal transgent or the protein or a composition that comprises the composition described above in a human cuit dose form; (8) an antibody or the fragment, which is monoclonal; the antibody or the fragment, which is monoclonal; the protein or a composition animal that produces the monoclonal; the protein or a composition animal that produces the monoclonal; the protein or a composition animal that produces the composition or a composition animal that produces the composition or a composition animal that produces the composition or a composition ani
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hybridoma that produces the antibody, (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1, and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P106B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P106B v.2 peptide, which is used in the exemplification of the present invention. The human 254P106B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     254P1D6B; small interfering RNA; siRNA; immune response;

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the case the nucleotides in case of the ore sequence of the ORF, where the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the cability of the 20, 21, 22, 23, 24, or 25 contiguous consists essentially of consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ABN06929, ABN06934 or ABN06956), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of a camposition that modulates the captures of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition deave in a human current or should be an antibody or its fragment, which is monoclonal; (9) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the antibody; (10) a non-human transgance animal that produces the animal animal transgance animal that produces the animal animal transgance animal that produces the animal animal transgance animal transgance animal that produces the anima
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hybridoma that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cycostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254PlD6B v. 5 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                   New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        254P1D6B; small interfering RNA; siRNA; immune response;
254P1D6B-related protein; cytostatic; gene therapy; cancer; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the occess the consists acid open reading frame (ORF) sequence which encodes the consists essentially or corresponds to a subsequence of the ORF, where the consists essentially of, or consists (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 [Pl., see SEQ ID NO.3, 5 or 7 ADRO0592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or contrict that is a full complement of the polynucleotide described above; (4) contact is a full complement of the polynucleotide described above; (4) contact is a full complement of the polynucleotide described above; (4) composition that modulates the composition that modulates the composition that comprises the composition described above in a human comprise of a call that expresses a protein of Pl; (7) a pharmaceutical comprises the antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent confidence form; (8) an antibody or its fragment, which is monoclonal; (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl; 254P1D6B has cytostatic activity, and call that express the protein of Pl;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                             New 254P1D6B siRNA composition comprising a double stranded siRNA that
                                                                                                                          g

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to subsequence of the ORF, where the couples stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concludes in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (PI, see SEQ ID CN 03, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein CC that is at least 90, 91, 92, 94, 95, 96, 97, 98, or 99‡ homologous or identical to an entire amino acid sequence of PI; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide confidential in manner response directed to the protein or a confirmation in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related polymucleotide; (6) a composition that modulates the composition that modulates the composition that modulates the composition described above in a human cc unit dose form; (8) an antibody or its fragment, which is monoclonal; confirmathat produces the antibody or its fragment, which is monoclonal; confirmathat produces the antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, which is manner and an antibody or its fragment, and an antibody or its fragment and an antibody or its fragment and an antibody or its fragment and an antibody or its fragm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          hybridoma that produces the antibody; (11) delivering a cycotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and class growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254PlD6B v. 5 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               254P1D6B; small interfering RNA; siRNA; immune response;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) as useful in gene therapy techniques to restore normal cativity of (II) and to the teat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful in medical imaging of sincolving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostic seaponsible for genefic dissorders or other traits to assess blodiversity are polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                         Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1.5%; Score 83; DB 4; Length 19; 100.0%; Pred. No. 34;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mismatches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             claim 20; SEQ ID NO 52425; 103pp; English.
                                                      Novel human diagnostic protein #22057.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADR00854 standard; peptide; 24 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1.5.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the couposition that caid open reading frame (ORF) sequence which encodes the couple stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PlD6B-related polynucleotide; (6) a composition that modulates the captures the composition described above in a human cut dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgent to a call that expresses a protein of P1; (7) a pharmaceutical correct or a diagnostic agent to a cell that expresses the protein of P1; (10) a non-human transgent to a composition and methods are useful (12) inhibiting growth, reproduces the antibody; (11) delivering a cyclotoxic agent or a diagnostic agent to a composition or survival of cancer cells that expresses the protein of P1; or a diagnostic agent to a composition or survival of cancer cells that expresses the protein of P1; and C12) inhibiting growth, reproducing or every measure sequence represents a human 254PlD6B v.2 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

```
The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID ONC), So T ARROSSY, ARROSSY, ARROSSY, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cany of the 42 lists of peptides, given in the specification, or a protein cany of the 42 lists of peptides, given in the specification, or a protein cany of the 42 lists of peptides, given in the specification, or a protein cany of the protein of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) a cangosition and anomalian immune response directed to the protein or a 24F1D6B-related protein or a 254F1D6B-related protein or a 254F1D6B-related polynucleotide; (6) a composition that modulates the composition that modulates the composition that comprises the composition does form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the animal and animal and animal and animal and animal and animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P1D6B v:3 peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1 254plbB has cytostatic activity, and can be
                                                                                                                                                                254PID6B-related protein; cytostatic; gene therapy; cancer; human; 254PID6B v.3; chromosome 6.

                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12-AUG-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Kanner SB,
```

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting

Example 9; SEQ ID NO 138; 345pp; English.

and treating cancer.

chromosome 6. Homo sapiens.

```
The present interaction that comprises a 237-fine breath interacting the composition that comprises a double stranded shrNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cube nucleotides protein, or corresponds to a subsequence of the ORF, where the double stranded shrNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a perotein of figure 2 (Pt, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or that encodes the protein; of a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) composition in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related polynucleotide described above; (4) composition that modulates the composition described above in a human curit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgent can antibody or its fragment, which is monoclonal; (12) inhibiting growth, reproduction or antibody; (10) a non-human transgent to a cell that expresses the antibody; (10) a continuity of cancer cells that expresses the protein or survival of cancer cells that expresses the protein or survival of cancer cells that expresses the protein or survival of cancer cells that expresses the protein or survival of cancer cells that expresses the protein or survival or cancer cells that expresses the protein or survival or cancer cells that expresses the protein or survival or cancer cells that expresses the protein or survival or cancer cells that expresses and mathematical and mathematical expresses the protein or survival or cancer cells that expresses the protein or survival or cancer cells that expresses and mathematical and mathematical and mathematical and mathematical and mathematical and mathematical and mathematical and mathematical and mathematical and mathematical and mathemat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 9 AA;

The invention provides a method of diagnosis of tauopathies in an individual that comprises determining the ratio of phospho-tau (181)/
c total tau. Tau and phospho tau are useful as neurological markers for the manufacture of a diagnostic kit for the diagnosis of a tauopathy and/or the differential diagnostic kit for the diagnosis of a tauopathy and or the differential diagnostic form an immunological complex with monoclonal antibody HT7 and MAA AT270 comprising at least the minimal epitope of HT7 or AT270 is useful to measure phospho-tau levels and diagnose a tauopathy or for the differential diagnosis of a tauopathy versus a non and/or for the differential diagnosis of a tauopathy versus a non caupathy. The kit is useful for the diagnosis of Alzheimer's disease, pick's disease, sporadic Frontotemporal dementia and/or Frontotemporal dementia and/or Frontotemporal dementia and/or for neurotoxicity in patients with leukemia. The disease, stroke and/or neurotoxicity in patients with leukemia. The for determining the effectiveness of a treatment. The present sequence represents a phospho-peptide binding to MADS HT7 and AT270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining the ratio of phospho-tau / total tau is useful for diagnosing a tauopathy i.e. Alzheimer's disease or Pick's disease, versus a non tauopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1.1%; Score 61.5; DB 4; Length 34;

The present invention describes a method for the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from neurological disease involves using phospho-tau (1) as a neurological marker. Also described are: (1) a diagnostic kit for use in the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from another neurological disease; and (2) use of an antibody that specifically recognises (1) for the manufacture of the diagnostic kit. (1) has neuroprotective and nootropic activities, and can be used as a neurological marker in the differential clasmosis and in the manufacture of a diagnostic kit for the differential clasmosis of an individual suffering from Alzheimer's disease versus an individual suffering from another neurological disease such as dementics with Lewy bodies, Parkinson's disease without dementia, multi-system arrophy and/or progressive supranuclear palsy; and for screening or monitoring the effect on an individual of compounds which prevent on an individual of compounds which prevent or an individual compounds which prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individual prevent or an individua
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treat Alzheimer's disease and the other neurological diseases. The method is effective in the differential diagnosis of Alzheimer's disease versus sucher neurological disease. The present sequence represents a cerebrospinal fluid (959)-beta-amyloid synthetic peptide which is used in the exemplification of the present invention
                                                                                                                                                                                                                                       Cerebrospinal fluid; CSF; beta amyloid; differential diagnosis; neurological disease; Alzheimer's disease; neuroprotective; nootropic; dementic; Parkinson's disease; dementia; multi-system atrophy; progressive supranuclear palsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Method for the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from another neurological disease involves use of phospho-tau as a neurological
                                                                                                                                                                                         Cerebrospinal fluid (CSF)-beta-amyloid synthetic peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "phosphorylated threonine"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vanmechelen E, Vanderstichele H, Hulstaert F;

                                                                                                                                                                                                                                                                                                                      4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 23, 24 or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists sesentially of, or consists of a peptide of eight, nine, ten, or No.3, sor 7 ADROS92, ADROS959, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1, (2) a polymucleotide that encodes the protein, (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4)

Also described: (1) a composition that comprises consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0596), or a peptide included inn that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4)
                        hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pi; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pi. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       254PID6B; small interfering RNA; siRNA; immune response;

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 9; SEQ ID NO 249; 345pp; English.

ö The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous mucleotides in length. Also described: (I) a composition that comprises, consists essentially of, or consists es a peptide of eight, nine, ten, on eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID

any of the 42 lists of peptides, given in the specification, or a protein any of the 42 lists of peptides, given in the specification, or a protein that is at least 89, 91, 92, 93, 94, 95, 96, 97, 98, on 99* homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that as a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of 8 confecting, in a sample, the presence of a 254PlD6B-related polynucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human composition that composition and P1; (7) a pharmaceutical confidence that produces the antibody; (11) delivering a cytotoxic agent on non-human transgenic animal that produces the antibody; (10) a photosic of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1; 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful contracting and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22. %\$GGGGGGGGGGGGGGGGGGGGGGGGGGGGGGGGGG

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting protein or corresponand treating cancer.

Example 1; SEQ ID NO 12; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ABNO0592, ABRO0594 or ABRO0596), or a peptide infolded in any of the 42 lists of peptides, given the specification, or a protein chat is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5)

```
detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related polynuclectide; (6) a composition that modulates the catatus of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cyctotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B v.6, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or coresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl. see SEQ ID NO.3; 5 or 7 ADRO0592, ADRO0599, or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4)
                                                                                                                                                                                                                                                                                                                              960
                                                                840
                                                                                                                                                                                                                                                          960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting

generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PloB-related protein or a 254PloB-related polyucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and cl. 2) inhibiting growth, reproduction or survival of cancer cells that expresses the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful cor treating and detecting cancer. The present sequence represents the human 254PlD6B v.1 clone LCP-3, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous ridentical to an entire amino acid sequence of Pl; (2) a polynucleotide
                                                                                                                       840
                                                                                                                                                                                  900
                                                                                                                                                                                                                                                                                                                960
                                                                                                                                                                                                                                                                                                                                                                         960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

```

that encodes the protein; (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) generating, in a sample, the presence of a 254P106B-related protein or a 254P106B-related protein or a 254P106B-related protein or a camposition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P106B has cytostatic activity, and can be useful for treating and detecting cancer. The present sequence represents the human 254P106B v.2, which is used in the exemplification of the present invention. The human 254P106B gene is located on chromosome 6p22.

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 13; SEQ ID NO 259; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B protein, oper reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, sor 7 ANROGS22, ANROGS24, or ABROGS26), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or

```
identical to an entire amino acid sequence of Pi; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide described above; (4) generating a mammalian immune response directed to the protein of Pi; (5) detecting, in a sample, the presence of a 254P106B-related protein or 254P106B-related polynucleotide; (6) a composition that modulates the 254B106B-related polynucleotide; (6) a composition that modulates the 254B106B-related polynucleotide; (6) a composition that modulates the 254B106B and antibody or its fragment, which is monoclonal; (9) anno-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pi; and can be express the protein of Pi. 254P106B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a cempalification of the present invention. The human 254P106B gene is coated on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B cated open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous mucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID 780 840 840 900 900 960 960 New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer. New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B N-PSDB; ADR00591

```
or corresponds to a subsequence of the ORF, useful for detecting
```

Claim 1; SEQ ID NO 3; 345pp; English.

The present invention describes a 254P1D6B small interfering RNA (SIRNA) Composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the control of coid open reading frame (ORF) sequence which encodes the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous contiguous anno acids of a protein of figure 2 (Pl, see SEQ ID nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0552, ADRO0559, or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) conference of a 254P1D6B-related protein or a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that expresses the protein of P1; and con-human transgenic animal that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytostatic activity, and can be composition or survival of cancer cells that express the protein of P1; 254P1D6B has cytostatic activity, and can be composition and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B v1 clone LCP-3, which is used in the exemplification of creating an expression of control of control of control of c

Example 5; SEQ ID NO 273; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the consists acid open reading frame (ORF) sequence of the concision that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 [Pl. see SEQ ID NO:3, 5 or 7 AbR00592, AbR00594 or AbR00566), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polynucleotide that is a feat be protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of Pl; (5) generating in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above; (10) a non-human transgenic animal that expresses a protein of Pl; (7) a pharmaceutical composition at a diagnostic agent to a cell that expresses the protein of Pl; (10) a non-human transgenic animal that expresses the protein of Pl; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and composition or survival of cancer cells that expresses the protein of Pl; and composition or survival of cancer cells that express the protein of Pl; 254PID6B has cytostatic activity, and can be human 254PID6B vertices which is used in the exemplification or confidence or processes the protein sequence, which is used in the expressible or protein sequence, which is used in the expressibility of the present invention. The human 254PID6B gene is located to be protein or protein sequence.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the capture acid open reading frame (ORF) sequence which encodes the capture the nuclectides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID CO CONSISTS ADRO0594). ADRO0595, or a peptide in included in any of the 42 lists of peptides of a protein of figure 2 (Pl, see SEQ ID CONSISTS OF 7 ADRO0595), or a peptide included in any of the 42 lists of peptides given in the specification, or a protein cany of the 42 lists of peptides of sequence of Pl; (2) a polynucleotide that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or confined to an entire amino acid sequence of Pl; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) detecting a mammalian immune response directed to the protein or a 244D106B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition that comprises the composition that comprises the composition does form; (8) an antibody or its fragment, which is monoclonal; (9) which does form; (8) an antibody or its fragment, which is monoclonal; (9) which does form; (9) an antibody or its fragment, which is monoclonal; (10) a pharmaceutic or a conformation animal that produces the antibody; (10) a pharmaceutic or a composition that modulates the composition animal that produces the antibody; (10) a pharmaceutic or a composition that composition animal that produces the antibody; (10) a pharmaceutic or a composition animal that produces the antibody; (10) a pharmaceutic or a composition animal that produces the antibody; (10) a pharmaceutic or a composition animal that produces the anon-than animal that produces the animal animal that produces the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hybridoma that produces the antibody; (11) delivering a grotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P106B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P106B v.3 protein sequence, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on
                                                                      New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                              Example 5; SEQ ID NO 274; 345pp; English.
                                                                                                                                                                                        treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chromosome 6p22
                                                                                                                                                                                    and

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the controlled siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous controlled siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous contiguous animo acids of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0556), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein chat is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) confined in a sample, the presence of a 254PID6B-related protein or a cell that expresses a protein of Pl; (7) a pharmaceutical composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition of Pl; (7) a pharmaceutical composition that comprises the protein of Pl; (7) a pharmaceutical composition that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and con the protein of Pl; and or a diagnostic agent to a cell that expresses the protein of Pl; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and corressents a must be a protein of Pl; and protein of Pl; and present ingent therapy. The composition or survival of cancer cells that expressent sequence represent sequence represent invention. The human 254PID6B gene is located on
                                                                                                          New 254FID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254FID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                     Example 5; SEQ ID NO 272; 345pp; English.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists as length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pt, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cot that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98* homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) cannow that is a full complement of the polynucleotide described above; (4) cannow that is a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human integration or survival of cancer cells that expresses the protein of P1. 254P1D6B has cytostatic activity, and can be cased in gene therapy. The composition or survival of cancer cells the human 254P1D6B with the exemplification of the present concepted to the present of the present in the exemplification of the present concepted in the exemplification of the present concepted in the exemplification.
